Introduction

oneM2M has published its Candidate Release set of specifications in August 2014. The Candidate Release includes the document TS 0005 “Management Enablement (OMA)” which specifies the usage of OMA DM (versions 1.3 and 2.0) and OMA LWM2M resources in the oneM2M systems.

In the latest revision of TS-0005, clause 6.6.1. of this specification provides the definition of a set of new LwM2M Objects , which are denoted “M2M CMDH Policies Objects”. These MCMDH Policy Objects represents a set of policies which controls Communication Management and Delivery Handling (CMDH) of M2M devices, which can be provisioned and managed remotely using protocols.

Actions

oneM2M kindly asks OMA DM to review the attached specifications [1] of the MCMDH LwM2M Objects and to provide comments if there are any.

oneM2M kindly asks OMNA for registration of the 9 LwM2M Objects with the LwM2M radical identifier urn:oma:lwm2m:ext-onem2m:
