## 4. Release Version Overview

To perform management operations, the DM Server can send the DM commands to the DM Client, and receive the corresponding results from the DM Client. This Request-Response model is the basic characteristics of the DM protocol.

MgmtPolicyMO v1.0 enables a more proactive management approach where the devices are able to perform actions autonomously based on management policies. These policies are pre-defined by the Management Authority and downloaded into the devices via the interface provided by the MgmtPolicyMO. Afterwards the devices will continuously evaluate/monitor the policies and perform necessary actions. If the policy conditions are met, one or more management actions will be triggered. Possible management actions include, but are not limited to: software management, firmware update, parameter configuration update and initiating a diagnostic and troubleshooting procedure.

After execution, DMS will be notified by the DM Client about the policy management results.

### 4.1 Version 1.0 Functionality

MgmtPolicyMO V1.0 covers:

- Download, update, activation, deactivation and removal of management policy(ies) in the device
- Capability to configure specific management policies, composed of conditions and actions, based on MO objects
- Reporting the results of management policy actions to DMS
