SyncML Device Information DTD, version 1.1

Abstract

This document defines the Document Type Definition (DTD) for the XML representation of the Device Information document. This XML document describes the capabilities of the device and is used in SyncML data synchronization protocol operations.

Data synchronization provides the means for two different networked object stores to remain in identical states. Different forms of data synchronization can be categorized into one of a number of topologies, based on the architecture used by a data synchronization server, or sync engine. Sync engines need to understand the features of a device they synchronize with. This information is often stored in a Device Information document on the target device.

1 Introduction

This document defines the Document Type Definition (DTD) for the XML representation of the Device Information object (DevInf.DTD). The DevInf.DTD is intended to be used to exchange device specific information. Exchange of device specific information such as available memory and item identifiers, supported local databases is a prerequisite to successful data synchronization.

Data synchronization provides the means for two different networked object stores to remain in identical states. Different forms of data synchronization can be categorized into one of a number of topologies, based on the architecture used by a data synchronization server, or sync engine. Sync engines need to understand the features of a device they synchronize with. This information is often stored in a Device Information document on the target device.

2 Formatting Conventions

The key words "MUST", "MUST NOT", "REQUIRED", "SHALL", "SHALL NOT", "SHOULD", "SHOULD NOT", "RECOMMENDED", "NOT RECOMMENDED", "MAY" and "OPTIONAL" in this document are to be interpreted as described in [4].

Any reference to components of the Device Information DTD or XML snippets are specified in this type face.

3 Terminology

Device Information

A document or object store (i.e., a data base) on the source device that records information about the capabilities of the source device.

4 XML Usage

The device information is represented in a markup language defined by [6]. The Device Information DTD (Document Type Definition) defines the XML document type used to represent information about the capabilities of a data synchronization client device.

Device Information documents are specified using well-formed XML. However, they need not be valid XML. That is, the Device Information documents do not need to specify the XML prolog. They only need to specify the body of the XML document. This restriction allows for Device Information documents to be specified with greater terseness than well-formed, valid XML documents.

The Device Information DTD makes use of XML name spaces. Name spaces must be declared on the first element type that uses an element type from the name space.

Names in XML are case sensitive. By convention in the Device Information DTD, the element type and attribute list names are specified with a "Hungarian" like notation of the
first character in each word of the name in upper case text and remainder of the characters
in each word of the names specified in lower case text. For example, DevInf for the Device
Information root element type tag.

The element types in the Device Information DTD are defined within a namespace
associated with the URI http://www.syncml.org/docs/devinf_v11_20020215.dtd or the
URN syncml:devinf.

The formal public identifier (FPI) is the traditional format for specifying unique identifiers for
XML entities. The FPI for the DTD described in this specification is:

-//SyncML//DTD DevInf 1.1//EN

The name for the file object corresponding to this document on a device MUST be:

devinf11

The Device Information DTD also makes use of XML standard attributes, such as xml:lang. Any XML standard attribute can be used in a SyncML document.

XML can be viewed as more verbose than alternative binary representations. This is often
cited as a reason why it may not be appropriate for low bandwidth network protocols. In
most cases, this specification uses shortened element type and attribute names. This
provides a minor reduction in verbosity. Additionally, the Device Information documents can
be encoded in a tokenized, binary format defined by [6]. The token values used to encode
the Device Information documents are defined in chapter 7 of this document. The use of [6]
format is external to this specification and should be transparent to any XML application
supporting this DTD. The combination of the use of shortened element type and attribute
names and an alternative binary format makes this specification competitive, from a
compressed format perspective, with alternative, but private, binary representations for
Device Information documents.

One of the main advantages of XML is that it is a widely accepted International
recommendation for text document markup. It provides for both human readability and
machine processability. In addition, XML allows the originator to capture the structure of a
document, not just it’s content. This is extremely useful for applications such as data
synchronization, where not just content, but structure semantics is often exchanged.

The SyncML Device Information document also can be identified as a MIME content type.
MIME is the Internet standard for identifying multipurpose message contents. It provides a
useful mechanism for differentiating between different content and document types.

4.1 MIME Usage

The [5] Internet standard provides an industry-accepted mechanism for identifying different
content types. A MIME media type identifies the SyncML Device Information document. The
media type for the Device Information document is registered within the vendor tree. There
are two MIME content types for the Device Information document. The MIME content type
of application/vnd.syncml-devinf+xml identifies the clear-text XML representation
for the Device Information document. The MIME content type of
application/vnd.syncml-devinf+wbxml identifies the WBXML binary
representation for the Device Information document. Section 14 of this specification specifies the MIME content type registration for these two MIME media types.

One of these two MIME content types MUST BE used for identifying Device Information documents within transport and session level protocols that support MIME content types.

5 Device Information Element Descriptions

The following element types are included in the Device Information DTD.

5.1 CTCap

**Usage:** Specifies the content type capabilities of the device.

**Parent Elements:** DevInf

**Restrictions:** The content type capabilities of the device SHOULD be defined.

**Content Model:**

```
CTCap ((CTType, (PropName, (ValEnum+ | (DataType, Size?))?, DisplayName?, (ParamName, (ValEnum+ | (DataType, Size?))?, DisplayName?)*)+)+)
```

**Attributes:** None.

**Example:**

```xml
<CTCap>
  <CTType>text/x-vcard</CTType>
  <PropName>BEGIN</PropName>
    <ValEnum>VCARD</ValEnum>
  <PropName>END</PropName>
    <ValEnum>VCARD</ValEnum>
  <PropName>VERSION</PropName>
    <ValEnum>2.1</ValEnum>
  <PropName>FN</PropName>
  <DataType>chr</DataType>
  <PropName>N</PropName>
  <PropName>TEL</PropName>
    <ParamName>WORK</ParamName>
    < ParamName>HOME</ParamName>
  <CTType>text/x-vcalendar</CTType>
  <PropName>BEGIN</PropName>
    <ValEnum>VCALENDAR</ValEnum>
  <PropName>VEVENT</PropName>
    <ValEnum>1.0</ValEnum>
  <PropName>DTSTART</PropName>
    <DataType>datetime</DataType>
  <PropName>DTEND</PropName>
    <DataType>datetime</DataType>
  <PropName>DESCRIPTION</PropName>
</CTCap>
```
5.2 CType

Usage: Specifies the type of a supported content type.

Parent Elements: CTCap, Rx, Rx-Pref, Tx, Tx-Pref

Restrictions: If a parent element is present, this element type is required. The value for this element can be e.g., text/x-vcard, text/vcard, text/x-vcalendar, or text/calendar. Some other possible values for this element are specified in the SyncML representation protocol [1]. Other values can also be specified.

Content Model:

```
(#PCDATA)
```

Attributes: None.

Example:

```
<CTCap>
  <CTType>text/vcard</CTType>
</CTCap>
```

5.3 DataStore

Usage: Specifies the properties of a given local datastore.

Parent Elements: DevInf

Restrictions: One or more of the element types are required. One element type is required for each of the local datastores.

Content Model:

```
(SourceRef, DisplayName?, MaxGUIDSize?, Rx-Pref, Rx*, Tx-Pref, Tx*, DSMem?, SyncCap)
```

Attributes: None.

Example:

```
<DataStore>
  <SourceRef>./contacts</SourceRef>
  <DisplayName>Addressbook</DisplayName>
  <MaxGUIDSize>32</MaxGUIDSize>
  <Rx-Pref>
    <CTType>text/vcard</CTType>
    <VerCT>3.0</VerCT>
  </Rx-Pref>
  <Rx>
    <CTType>text/x-vcard</CTType>
    <VerCT>2.1</VerCT>
  </Rx>
  <Tx-Pref>
    <CTType>text/vcard</CTType>
    <VerCT>3.0</VerCT>
  </Tx-Pref>
</DataStore>
```
5.4 DataType

Usage: Specifies the datatype of a given content type property or parameter.

Parent Elements: CTCap

Restrictions: Type values for this element type can be one of chr, int, bool, bin, datetime, phonenum as defined in the table below. Other values can also be specified.

<table>
<thead>
<tr>
<th>DataType</th>
<th>Datatype of a content type property or parameter</th>
</tr>
</thead>
<tbody>
<tr>
<td>chr</td>
<td>Character</td>
</tr>
<tr>
<td>int</td>
<td>Integer</td>
</tr>
<tr>
<td>bool</td>
<td>Boolean</td>
</tr>
<tr>
<td>bin</td>
<td>Binary</td>
</tr>
<tr>
<td>datetime</td>
<td>Date and time of day</td>
</tr>
<tr>
<td>phonenum</td>
<td>Phone number</td>
</tr>
</tbody>
</table>

Content Model:

`(#PCDATA)

Attributes: None.

Example:

```xml
<PropName>FN</PropName>
<DataType>chr</DataType>
<PropName>TEL</PropName>
<ParamName>WORK</ParamName>
<DataType>phonenum</DataType>
<ParamName>HOME</ParamName>
<DataType>phonenum</DataType>
```

5.5 DevID

Usage: Specifies the identifier of the source synchronization device.

Parent Elements: DevInf

Restrictions: The content information MUST specify a theoretically, globally unique identifier. This element type is mandatory.
5.6 DevInf

Usage: Specifies the root or document element type of the Device Information document.

Parent Elements: None.

Restrictions: This element type is mandatory and MUST be the root or document element.

Content Model:

```
(#PCDATA)
```

Attributes:

<table>
<thead>
<tr>
<th>Name</th>
<th>Type</th>
<th>Occurrance</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>xmlns</td>
<td>CDATA</td>
<td>IMPLICIT</td>
<td>Must be present with a value of 'syncml:devinf'.</td>
</tr>
</tbody>
</table>

Example:

```
<DevInf>
  <VerDTD>1.1</VerDTD>
  <DevID>1218182THD012345-2</DevID>
  <DevTyp>pager</DevTyp>
  <DataStore>...
  </DataStore>
</DevInf>
```

5.7 DevTyp

Usage: Specifies the type of the source synchronization device.

Parent Elements: DevInf

Restrictions: Type values for this element type can be e.g. pager, handheld, pda, phone, smartphone, server, workstation, as defined in the table below. Other values can also be specified. This element type is mandatory.

<table>
<thead>
<tr>
<th>DevTyp</th>
<th>Type of the device</th>
</tr>
</thead>
<tbody>
<tr>
<td>pager</td>
<td>Pager</td>
</tr>
<tr>
<td>handheld</td>
<td>Handheld PC/PDA</td>
</tr>
<tr>
<td>pda</td>
<td>Palm sized PC/PDA</td>
</tr>
<tr>
<td>phone</td>
<td>Cellular phone</td>
</tr>
<tr>
<td>smartphone</td>
<td>Smartphone</td>
</tr>
<tr>
<td>server</td>
<td>Server-class computer</td>
</tr>
</tbody>
</table>
workstation  Workstation-class computer

**Content Model:**

```
(#PCDATA)
```

**Attributes:** None.

**Example:**

```
<DevTyp>pager</DevTyp>
```

### 5.8 DisplayName

**Usage:** Specifies the display name of a given local datastore, or the display name of a given content type property or parameter.

**Parent Elements:** DataStore, CTCap

**Restrictions:** This element type is optional.

**Content Model:**

```
(#PCDATA)
```

**Attributes:** None.

**Example:** The following example specifies the display name of the contacts datastore.

```
<DataStore>
  <SourceRef>./contacts</SourceRef>
  <DisplayName>Addressbook</DisplayName>
</DataStore>
```

### 5.9 DSMem

**Usage:** Specifies the maximum memory and item identifier for a given local datastore.

**Parent Elements:** DataStore

**Restrictions:** The element type is optional.

**Content Model:**

```
(SharedMem?, MaxMem?, MaxID?)
```

**Attributes:** None.

**Example:** The following example specifies a shared datastore memory.

```
<DSMem>
  <SharedMem/>
  <MaxMem>65539</MaxMem>
  <MaxID>512</MaxID>
</DSMem>
```
5.10 Ext

**Usage**: Specifies the non-standard, experimental extensions supported by the device. The extensions are specified in terms of the XML element type name and the value.

**Parent Elements**: DevInf

**Restrictions**: The Ext element type MUST specify the extension element name. It may also specify one or more enumerated values. Multiple non-standard extensions can be specified by specifying the Ext element type multiple times. This element type is optional.

**Content Model**: 

```
(XNam, Xval*)
```

**Attributes**: None.

**Example**: The following example specifies a non-standard extension, named "CliVer" for a fictitious company, Foo, which takes values of "5.0", "5.01" or "5.02".

```
<Ext><XNam>X-Foo-CliVer</XNam><XVal>5.0</XVal><XVal>5.01</XVal><XVal>5.02</XVal></Ext>
```

5.11 FwV

**Usage**: Specifies the firmware version of the device.

**Parent Elements**: DevInf

**Restrictions**: If there is no firmware version of the device available, then the content information can also be a date. If the content information is a date, then it MUST be formatted as a complete representation, basic format of an [3] date or date and UTC time of day. For example, 19980114 or 19990714T133000Z. Only hours, minutes and second MUST be specified in the time component. This element type is optional.

**Content Model**: 

```
(#PCDATA)
```

**Attributes**: None.

**Example**:

```
<FwV>1.01</FwV>
```

5.12 HwV

**Usage**: Specifies the hardware version of the device.

**Parent Elements**: DevInf

**Restrictions**: If there is no hardware version of the device available, then the content information can also be a date. If the content information is a date, then it MUST be formatted as a complete representation, basic format of an [3] date or date and UTC time of day.
day. For example, 19980114 or 19990714T133000Z. Only hours, minutes and second MUST be specified in the time component. This element type is optional.

**Content Model:**

```xml
(#PCDATA)
```

**Attributes:** None.

**Example:**

```xml
<DeviceTime>19990714T133000Z</DeviceTime>
```

### 5.13 Man

**Usage:** Specifies the name of the manufacturer of the device.

**Parent Elements:** DevInf

**Restrictions:** This element type is optional.

**Content Model:**

```xml
(#PCDATA)
```

**Attributes:** None.

**Example:**

```xml
<Man>Foo Industries, Inc.</Man>
```

### 5.14 MaxGUIDSize

**Usage:** Specifies the maximum size of a global unique identifier for a given local datastore, in bytes the device is able to receive and store.

**Parent Elements:** DataStore

**Restrictions:** Content information MUST be specified as the decimal integer number indicating the maximum size, in bytes of the temporary GUID the client device is able to receive and store for a given local datastore, and the server is allowed to send. The device acting as a client MUST, and the device acting as a server MUST NOT send this information.

**Content Model:**

```xml
(#PCDATA)
```

**Attributes:** None.

**Example:** The following is an example of a client capable of receiving and storing a maximum 2 bytes long GUID.

```xml
<MaxGUIDSize>2</MaxGUIDSize>
```
5.15 MaxID

**Usage:** Specifies the maximum number of items that can be stored in a given local datastore.

**Parent Elements:** DSMem

**Restrictions:** Content information MUST be specified as the decimal integer number of maximum item identifiers that are available for all items in the local datastore. This element type is optional.

**Content Model:**

```
(#PCDATA)
```

**Attributes:** None.

**Example:** The following is an example of a maximum of 1024 items.

```
<MaxID>1024</MaxID>
```

5.16 MaxMem

**Usage:** Specifies the maximum memory size for a given local datastore, in bytes.

**Parent Elements:** DSMem

**Restrictions:** Content information MUST be specified as the decimal integer number of maximum free bytes of memory available in the local database. This element type is optional.

**Content Model:**

```
(#PCDATA)
```

**Attributes:** None.

**Example:** The following is an example of 65539 bytes.

```
<MaxMem>65539</MaxMem>
```

5.17 Mod

**Usage:** Specifies the model name or model number of the device.

**Parent Elements:** DevInf

**Restrictions:** This element type is optional.

**Content Model:**

```
(#PCDATA)
```

**Attributes:** None.

**Example:**
5.18 OEM

Usage: Specifies the OEM (Original Equipment Manufacturer) of the device.

Parent Elements: DevInf

Restrictions: This element type is optional.

Content Model:

```
(#PCDATA)
```

Attributes: None.

Example:

```
<OEM>Bar Works, Ltd.</OEM>
```

5.19 ParamName

Usage: Specifies supported parameters of a given content type property.

Parent Elements: CTCap

Restrictions: If the content type is either text/x-vcard, text/vcard, text/x-vcalendar or text/calendar, the value for this element type MUST be one of the values defined in the table below. Sending the ParamName element is optional if the device supports all the parameters of all the supported properties (e.g. property TEL is supported, and parameters PREF, WORK, HOME, VOICE, FAX, MSG, CELL, PAGER, BBS, MODEM, CAR, ISDN, and VIDEO are all supported).

<table>
<thead>
<tr>
<th>text/x-vcard</th>

  <ParamName>WORK</ParamName>
</CTCap>
```

### 5.20 PropName

**Usage:** Specifies a supported property of a given content type.

**Parent Elements:** CTCap

**Restrictions:** If the content type is either `text/x-vcard`, `text/vcard`, `text/x-vcalendar` or `text/calendar`, the value for this element type MUST be one of the values defined in the table below.

<table>
<thead>
<tr>
<th>Content type</th>
<th>PropName</th>
</tr>
</thead>
<tbody>
<tr>
<td>text/x-vcard</td>
<td></td>
</tr>
<tr>
<td>text/vcard</td>
<td></td>
</tr>
<tr>
<td>text/x-vcalendar</td>
<td></td>
</tr>
<tr>
<td>text/calendar</td>
<td></td>
</tr>
</tbody>
</table>
Content Model:

```xml
(#PCDATA)
```

Attributes: None.

**Example:** The following is an example of supporting properties `BEGIN`, `VERSION`, `DTSTART`, `DTEND`, `DESCRIPTION`, `END` of the `text/x-vcalendar` content type.

```xml
<CType>text/x-vcalendar</CType>
<PropName>BEGIN</PropName>
    <ValEnum>VCALENDAR</ValEnum>
    <ValEnum>VEVENT</ValEnum>
<PropName>VERSION</PropName>
    <ValEnum>1.0</ValEnum>
<PropName>DTSTART</PropName>
<PropName>DTEND</PropName>
<PropName>DESCRIPTION</PropName>
<PropName>END</PropName>
```  

5.21 Rx

**Usage:** Specifies the supported type and version of a content type received by the device.

**Parent Elements:** DataStore
Restrictions: This element type is optional.

Content Model:

{(CTType, VerCT)}

Attributes: None.

Example:

```xml
<Rx>
  <CTType>text/x-vcard</CTType>
  <VerCT>2.1</VerCT>
</Rx>
```

5.22 Rx-Pref

Usage: Specifies the preferred type and version of a content type received by the device.

Parent Elements: DataStore

Restrictions: The Rx-Pref element type is required for each specified datastore.

Content Model:

{(CTType, VerCT)}

Attributes: None.

Example:

```xml
<Rx-Pref>
  <CTType>text/vcard</CTType>
  <VerCT>2.1</VerCT>
</Rx-Pref>
```

5.23 SharedMem

Usage: Specifies if the datastore memory is shared. If the memory is shared, the actual memory space is used also by other datastores, and the actual memory space may be more limited than in theory it might be.

Parent Elements: DSMem

Restrictions: The content of this element MUST be empty. This element type is used as a flag, and if this element type is present, then the given datastore memory is shared. This element is optional.

Content Model:

EMPTY

Attributes: None.

Example: The following is an example of shared datastore memory.

```xml
<DSMem>
</DSMem>
```
5.24 Size

**Usage:** Specifies the size of a property or a parameter of a given content type.

**Parent Elements:** CTCap

**Restrictions:** If the value of the DataType element is either `int` or `bin`, then the Size element type is used to specify the size of the property or parameter.

**Content Model:**

```
(#PCDATA)
```

**Attributes:** None.

**Example:** The following is an example of supporting the vCard property PHOTO, and the size of the GIF image is 2400 bytes.

```
<PropName>PHOTO</PropName>
<ParamName>GIF</ParamName>
.DataType>bin</DataType>
<Size>2400</Size>
```

5.25 SourceRef

**Usage:** Specifies the reference URI for a local database.

**Parent Elements:** DataStore

**Restrictions:** If the DataStore element type is present, then the SourceRef element type is required. The content information of this element type is either the absolute or relative URI of the datastore.

**Content Model:**

```
(#PCDATA)
```

**Attributes:** None.

**Example:** The following is an example of a source reference to a relative URI for the InBox database.

```
<SourceRef>./InBox</SourceRef>
```

5.26 SupportLargeObjs

**Usage:** Specifies that the device supports handling of large objects.

**Parent Element:** DevInf
Restrictions: If the sending device has specified `<SupportLargeObjs/>` elements in its Device Information then the receiving device MUST (for server) or SHOULD (for client) specify `<MaxObjSize>` in its Meta Information as specified in the Meta Information specification v1.1[8].

Content Model:

(EMPTY)

Attributes: None.

Example:

```xml
<DevInf>
  <VerDTD>1.1</VerDTD>
  <DevID>1218182THD012345-2</DevID>
  <DevTyp>pager</DevTyp>
  <SupportLargeObjs/>
  <DataStore>
    ...
  </DataStore>
</DevInf>
```

### 5.27 SupportNumberOfChanges

Usage: Specifies that the device supports number of changes

Parent Element: DevInf

Restrictions: Server SHOULD send `<NumberOfChanges>`, specified in Representation protocol specification v1.1 [1], if the client specifies `<SupportNumberOfChanges/>`. Server MUST NOT send `<NumberOfChanges>` if the client has not specified `<SupportNumberOfChanges/>` element in its Device Information.

Content Model:

(EMPTY)

Attributes: None.

Example:

```xml
<DevInf>
  <VerDTD>1.1</VerDTD>
  <DevID>1218182THD012345-2</DevID>
  <DevTyp>pager</DevTyp>
  <SupportNumberOfChanges/>
  <DataStore>
    ...
  </DataStore>
</DevInf>
```

### 5.28 SwV

Usage: Specifies the software version of the device.

Parent Elements: DevInf
Restrictions: If there is no software version of the device available, then the content information can also be a date. If the content information is a date, then it MUST be formatted as a complete representation, basic format of a [3] date or date and UTC time of day. For example, 19980114 or 19990714T133000Z. Only hours, minutes and second MUST be specified in the time component. This element type is optional.

Content Model:

```
(#PCDATA)
```

Attributes: None.

Example:

```
<SwV>0.1a</SwV>
```

5.29 SyncCap

Usage: Specifies the synchronization capabilities of the given local datastore.

Parent Elements: DataStore

Restrictions: This element is mandatory.

Content Model:

```
(SyncType+)
```

Attributes: None.

Example: The following is an example of supporting both two-way, and server alerted sync.

```
<DataStore>
  ...
  <SyncCap>
    <SyncType>1</SyncType>
    <SyncType>7</SyncType>
  </SyncCap>
</DataStore>
```

5.30 SyncType

Usage: Specifies the type of the supported synchronization.

Parent Elements: SyncCap

Restrictions: If the device supports synchronizations specified in the SyncML Sync protocol specification [2], then the value of this element MUST be one of the synchronization types specified in the table below. Other values can also be specified. One or more of the element types are required. One element type is required for each of the supported synchronizations.

<table>
<thead>
<tr>
<th>Support of 'two-way sync'</th>
<th>'1'</th>
</tr>
</thead>
<tbody>
<tr>
<td>Support of 'slow two-way sync'</td>
<td>'2'</td>
</tr>
</tbody>
</table>
Content Model:

```
(#PCDATA)
```

Attributes: None.

Example: The following is an example of identifying support for two-way sync.

```
<SyncType>1</SyncType>
```

5.31 Tx

Usage: Specifies the supported type and version of a content type transmitted by the device.

Parent Elements: DataStore

Restrictions: This element type is optional.

Content Model:

```
(CType, VerCT)
```

Attributes: None.

Example:

```
<Tx>
  <CType>text/x-vcard</CType>
  <VerCT>2.1</VerCT>
</Tx>
```

5.32 Tx-Pref

Usage: Specifies the preferred type and version of a content type transmitted by the device.

Parent Elements: DataStore

Restrictions: The Tx-Pref element type is required for each specified datastore.

Content Model:

```
(CType, VerCT)
```

Attributes: None.

Example:
5.33 UTC

Usage: Specifies that the device supports UTC based time.

Parent Element: DevInf

Restrictions: If UTC flag is present, the server SHOULD send time in UTC form, else MUST send in local time. Client MAY send time in local or UTC format.

Content Model:

(EMPTY)

Attributes: None.

Example:

```xml
<DevInf>
  <VerDTD>1.1</VerDTD>
  <DevID>1218182THD012345-2</DevID>
  <DevTyp>pager</DevTyp>
  <UTC/>
  <DataStore>
    ...
  </DataStore>
</DevInf>
```

5.34 ValEnum

Usage: Specifies the supported enumerated value of a given content type property.

Parent Elements: CTCap

Restrictions: If the content type is either text/x-vcard, text/vcard, text/x-vcalendar or text/calendar, the value for this element type MUST be one of the values defined in the table below.

<table>
<thead>
<tr>
<th>text/x-vcard</th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>PropName</td>
<td>ValEnum</td>
</tr>
<tr>
<td>BEGIN</td>
<td>VCARD</td>
</tr>
<tr>
<td>END</td>
<td>VCARD</td>
</tr>
<tr>
<td>VERSION</td>
<td>2.1</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>text/x-vcalendar</th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>PropName</td>
<td>ValEnum</td>
</tr>
<tr>
<td>BEGIN</td>
<td>VCALENDAR, VEVENT, VTTODO</td>
</tr>
<tr>
<td>END</td>
<td>VCALENDAR, VEVENT, VTTODO</td>
</tr>
<tr>
<td>VERSION</td>
<td>1.0</td>
</tr>
<tr>
<td>CLASS</td>
<td>PUBLIC, PRIVATE, CONFIDENTIAL</td>
</tr>
</tbody>
</table>
### text/vcard

<table>
<thead>
<tr>
<th>PropName</th>
<th>ValEnum</th>
</tr>
</thead>
<tbody>
<tr>
<td>BEGIN</td>
<td>VCARD</td>
</tr>
<tr>
<td>END</td>
<td>VCARD</td>
</tr>
<tr>
<td>VERSION</td>
<td>3.0</td>
</tr>
<tr>
<td>CLASS</td>
<td>PUBLIC, PRIVATE, CONFIDENTIAL</td>
</tr>
</tbody>
</table>

### text/calendar

<table>
<thead>
<tr>
<th>PropName</th>
<th>ValEnum</th>
</tr>
</thead>
<tbody>
<tr>
<td>CUTYPE</td>
<td>INDIVIDUAL, GROUP, RESOURCE, ROOM, UNKNOWN</td>
</tr>
<tr>
<td>BEGIN</td>
<td>VCALENDAR, VEVENT, VTODAY, VJOURNAL, VFREEBUSY, VTIMEZONE, VALARM</td>
</tr>
<tr>
<td>END</td>
<td>VCALENDAR, VEVENT, VTODAY, VJOURNAL, VFREEBUSY, VTIMEZONE, VALARM</td>
</tr>
<tr>
<td>VERSION</td>
<td>2.0</td>
</tr>
<tr>
<td>ATTACH</td>
<td>URI, BINARY</td>
</tr>
<tr>
<td>CLASS</td>
<td>PUBLIC, PRIVATE, CONFIDENTIAL</td>
</tr>
<tr>
<td>ACTION</td>
<td>AUDIO, DISPLAY, EMAIL, PROCEDURE</td>
</tr>
<tr>
<td>RELTYPE</td>
<td>PARENT, CHILD, SIBLING</td>
</tr>
</tbody>
</table>

#### Content Model:

```
(#PCDATA)
```

#### Attributes: None.

#### Example:
The following is an example of supporting iCalendar binary attachments.

```
<CTCap>
    <CTType>text/calendar</CTType>
    <PropName>BEGIN</PropName>
    <ValEnum>VCALENDAR</ValEnum>
    <ValEnum>VEVENT</ValEnum>
    <PropName>VERSION</PropName>
    <ValEnum>2.0</ValEnum>
    <PropName>ATTACH</PropName>
    <ValEnum>BINARY</ValEnum>
</CTCap>
```

### 5.35 VerCT

#### Usage: Specifies the version of a supported content type.

#### Parent Elements: Rx, Rx-Pref, Tx, Tx-Pref

#### Restrictions: If a parent element is present, this element type is required.

#### Content Model:

```
(#PCDATA)
```

#### Attributes: None.

#### Example:

None.
5.36 VerDTD

Usage: Specifies the major and minor version identifier of the Device Information DTD used in the representation of the Device Information document.

Parent Elements: DevInf

Restrictions: Major reversions of the specification create incompatible changes that will generally require a new parser. Minor revisions involve changes that do not impact basic compatibility of the parser. When the XML document conforms to this revision of the Device Information specification the value MUST be 1.1. The element type MUST be included in the DevInf element.

Content Model:

((#PCDATA))

Attributes: None.

Example:

```
<DevInf>
  <VerDTD>1.1</VerDTD>
  ...
</DevInf>
```

5.37 XNam

Usage: Specifies the name of one of the DevInf extension element types.

Parent Elements: Ext

Restrictions: The element type is required whenever an Ext element is present.

Content Model:

((#PCDATA))

Attributes: None.

Example:

```
<Ext>
  <XNam>X-Foo-CliVer</XNam>
  <XVal>5.0</XVal>
  <XVal>5.01</XVal>
  <XVal>5.02</XVal>
</Ext>
```

5.38 XVal

Usage: Specifies one of the valid values for a DevInf extension element type.
Parent Elements: Ext

Restrictions: One or more of the element types are required whenever an Ext element is present. One element type is required for each of the valid values for the extension element type. Ranges of valid values can be specified by a sequence of the first value in the range, followed by the string "." (i.e., PERIOD PERIOD), followed by the last value in the range.

Content Model:

```
(#PCDATA)
```

Attributes: None.

Example: The following example is for an extension element type that has a range of valid integer values from 1 to 5.

```
<Ext>
  <XNam>X-Bar-Enum</XNam>
  <XVal>1</XVal>
  <XVal>..</XVal>
  <XVal>5</XVal>
</Ext>
```

7 WBXML Definitions

This version of the DevInf DTD specification is associated with the WBXML code space FD2 and the formal public identifier -//SYNCML//DTD DevInf 1.1//EN.

The following WBXML token codes represent element types (i.e., tags) form code page 0x00, DevInf DTD.

<table>
<thead>
<tr>
<th>Element Type Name</th>
<th>WBXML Tag Token (Hex Value)</th>
</tr>
</thead>

</table>
8 Static Conformance Requirements

Static conformance requirements (SCR) specify the features that are optional, mandatory and recommended within implementations conforming to this specification.

Simple tables are used to specify this information

In these tables, optional features are specified by a "MAY", mandatory features are specified by a "MUST" and recommended features are specified by a "SHOULD", as defined in RFC 2119 [4].

An implementation, which does not include a particular option, MUST be prepared to interoperate with another implementation, which does include the option, though perhaps with reduced functionality.

The following specifies the static conformance requirements for the SyncML Device Information element types for devices conforming to this specification.

<table>
<thead>
<tr>
<th>Element Type</th>
<th>Support of Synchronization</th>
<th>Support of Synchronization</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>Server</td>

11 MIME Media Type Registration

The following section is the MIME media type registrations for SyncML Device Information specific MIME media types.

11.1 application/vnd.syncml-devinf+xml

To: ietf-types@iana.org

Subject: Registration of MIME media type application/vnd.syncml-devinf+xml

MIME media type name: application

MIME subtype name: vnd.syncml-devinf+xml

Required parameters: None

Optional parameters: charset, verdtd

Content-Type MIME header.

charset Parameter

Purpose: Specifies the character set used to represent the Device Information document. The default character set for SyncML Device Information document is UTF-8, as defined [RFC 2279].

Formal Specification: The following ABNF defines the syntax for the parameter.

chrset-param = ";" "charset" "=" <any IANA registered charset identifier>

Interoperability considerations: Implementations that have support for the mandatory features of this content type will greatly increase the chances of interoperating with other implementations supporting this content type. Conformance to this content type requires an implementation to support every mandatory feature.

verdtd Parameter

Purpose: Specifies the major/minor revision identifiers for the SyncML Device Information specification that defines the DevInf MIME media type. If present, MUST be the same value as that specified by the "VerDTD" element type in the DevInf MIME content information. If not present, the default value "1.0" is to be assumed.

Formal Specification: The following ABNF defines the syntax for the parameter.

verdtd-param = ";" "verdtd" "=" 1*numeric "." 1*numeric

text = 1*ALPHA

numeric = "0" / "1" / "2" / "3" / "4" / "5" / "6" / "7" / "8"/ "9"

Published specification:
http://www.syncml.org/docs/syncml_devinf_v11_20020215.pdf
Applications, which use this media type: This MIME content type is intended for common use by networked data synchronization applications.

Additional information:

Magic number(s): None

File extension(s): XDM

Macintosh File Type Code(s): XDML

Person & email address to contact for further information: admins@syncml.org

Intended usage: COMMON

Author/Change controller: admins@syncml.org

11.2 application/vnd.syncml-devinf+wbxml

To: ietf-types@iana.org

Subject: Registration of MIME media type application/vnd.syncml-devinf+wbxml

MIME media type name: application

MIME subtype name: vnd.syncml-devinf+wbxml

Required parameters: None

Optional parameters: charset, verdtd

Content-Type MIME header.

charset Parameter

Purpose: Specifies the character set used to represent the Device Information document. The default character set for SyncML Device Information document is UTF-8, as defined [RFC 2279].

Formal Specification: The following ABNF defines the syntax for the parameter.

chrset-param = ";" "charset" "=" <any IANA registered charset identifier>

Interoperability considerations: Implementations that have support for the mandatory features of this content type will greatly increase the chances of interoperating with other implementations supporting this content type. Conformance to this content type requires an implementation to support every mandatory feature.

verdtd Parameter

Purpose: Specifies the major/minor revision identifiers for the SyncML Device Information specification that defines the DevInf MIME media type. If present, MUST be the same value as that specified by the "VerDTD" element type in the DevInf MIME content information. If not present, the default value "1.0" is to be assumed.
Formal Specification: The following ABNF defines the syntax for the parameter.

verdtd-param = ";" "verdtd" "=" 1*numeric "." 1*numeric
text = 1*ALPHA

numeric = "0" / "1" / "2" / "3" / "4" / "5" / "6" / "7" / "8"/ "9"

Published specification:
http://www.syncml.org/docs/syncml_devinf_v11_20020215.pdf

Applications, which use this media type: This MIME content type is intended for common use by networked data synchronization applications.

Additional information:

Magic number(s): None

File extension(s): BDM

Macintosh File Type Code(s): BDML

Person & email address to contact for further information:
admins@syncml.org

Intended usage: COMMON

Author/Change controller: admins@syncml.org
